Version with Markings to Show Changes Made

In the Claims:

Please add a new claim 21 amend claim 14 as follows.

14. (Twice Amended) A liquid crystal display, comprising:

an insulating substrate;

a gate wire formed on the substrate;

a gate insulating layer covering the gate wire;

a data wire made of one of either molybdenum or molybdenum alloy and formed on the gate insulating layer;

a supplementary data wire located either on or under the entire data wire and made of either molybdenum nitride or molybdenum alloy nitride;

a passivation layer formed on the data wire or the supplementary data wire; and

<u>a</u> [an ITO] pixel electrode formed on the passivation layer and connected to the data wire through a contact hole formed in the passivation layer.

21. (New) The liquid crystal display of claim 14, wherein the pixel electrode is made of indium tin oxide (ITO).
